Photoshop's name is often considered an overused moniker and self-referential: For example, you might hear someone refer to him- or herself as a "Photoshop guru." I'd advise you to be careful before using Photoshop's name when describing yourself, as it may come across as arrogant. Similarly, you might use the name "Photoshop" when talking about an image editing technique, even if it's not the program you used. For example, say you use a photo editing program, such as Photoshop Elements or Adobe Lightroom, to remove red eye or fix a particular color. If you describe the process as "Photoshoping a photo," people will assume you're talking about Photoshop, and not the photo-editing program. Here are some other examples of people using "Photoshop" when they actually meant something else: You're taking a picture of a person in a room and notice that the wall behind the person has a small tear. You don't know how the wall got the tear and can't remember if you did it or if someone else did it, so you say, "I'm going to Photoshop a photo of this room." You aren't going to get the photo out of the house, put it in Photoshop, and create an entirely new photo. Instead, you'll bring the photo to the store and take it out, shoot it, and send it to Photoshop so that the company can make the alteration. See Figure 18-1. **Figure 18-1:** Remove the tear in the wall with the Spot Healing Brush tool. Illustrations by Nellie Bell This kind of error is common in the magazine and newspaper industry, where for years a process called copying and pasting has been used to create photos with a common look, such as the oft-used "flip the page and rotate it 180 degrees" method. With copy-and-paste, the original is captured, cut out, and pasted onto the next page to create a mirrored image of the first page. In many cases, the original image is printed, flipped, and then the mirrored copy is used as the cover photo. Too often, the technique is used without thinking about the result. For example, you create a logo and then use a program, such as Photoshop, to create a mirrored image of the logo. It's called cloning, and it creates a digital copy of the original logo. It's a faster way to make a

Q: How to style multiple td's using CSS? I'm trying to remove the gray border that surrounds an asp:ContentPlaceHolder. The borders are appearing for two reason. When the first column in the asp:ContentPlaceHolder appears, it uses a grid. The grid has a border around it which is what gives the border around each of the columns. But that border is too wide and I'd rather get rid of it. I've tried using the following CSS: .aspnetContentPlaceHolder { border:none!important; } .aspnetContentPlaceHolder table { border:none!important; } But it doesn't seem to work. How can I go about this? A: After playing around with this on a whim I figured out that after a table is generated from a grid, it has this CSS: .ASPContentGridTemplate { border: 0; border-collapse: collapse; } .ASPContentGrid-Border { border: 1px solid #cccccc; } A single line for the border is enough. So if you remove that, it will just have the shadow if there is one. No worries. A lot of good information is being shared on this community. If a question already exists, I would be happy to cite it as a solution. I appreciate all the research that goes into the information shared on these sites and Q&A. Thanks! A: John's article linked above is probably the best introduction to Windows Drivers that I have seen. EDIT: A few other articles that I found useful were: Documentation Changes for Windows 8 Devices Drivers Develop

Familial intracranial aneurysms: an update. Familial intracranial aneurysms are relatively common, being present in 6% to 10% of the population with a positive family history. Because their natural history is benign, prophylactic surgical resection is not indicated except to prevent rupture of the aneurysm. Familial cranial aneurysms are usually congenital but are generally sporadic and sporadic form of intracranial aneurysms is different from a congenital form. The risk of suffering a rupture of an intracranial aneurysm is greater in a vascular malformation. Current studies demonstrate that familial angio-obstructive phenomena and aortic aneurysms (particularly abdominal aortic aneurysms) are risk factors for the occurrence of intracranial aneurysms. The need for definitive therapy, the optimum neurosurgical technique, and the choice of surgical approach (coeliac-aortic bypass or extra-anatomic bypass) are not well established. We present the follow-up of the familial intracranial aneurysms along with a review of the literature and we discuss the surgical management of the familial intracranial aneurysms.2017 Best Adventures in the World The Dominican Republic may have its infamous Pedra Fria cave with its entrance on the island of Roatan, but we're talking about an adventure that's out of this world, literally.
