Ainvo Startup Manager is an approachable application that can be used to find, analyze, remove and add new programs to the Windows autostart sequence. It's practical for deleting the entries of those software products you never use, since these unnecessarily contribute to a slower boot time. Meanwhile, new ones can be created for frequently used applications, such as an instant messenger or audio player. Simple interface and settings It's wrapped in a user-friendly interface made from a large window with a neatly organized structure, where you can get started by performing an automatic startup scan with one click. After revealing the number of total found entries, the tool can be asked to display the name, start path on the disk and source in the registry of each entry. You can refresh this information if any changes were made in the meantime, remove any item from the list, as well as add new ones by indicating their EXE or DLL with the help of the file browser. Manage autostart entries and study reports Ainvo Startup Manager also provides options for opening an entry's location in Registry Editor to view and edit information. However, this is intended for expert users only, since you may risk inadvertently causing OS stability issues. Plus, you can view file properties, look up additional details on the developer's website, as well as view a report generated by the app with the name, full path and Registry Entry key of each program. Evaluation and conclusion It worked smoothly in our evaluation, without triggering the operating system to hang, crash or show error dialogs. We haven't come across any stability issues. CPU and RAM usage was minimal during startup scans. To sum it up, Ainvo Startup Manager facilitates a simple interface and options for managing autorun applications. Read more Microsoft is releasing a preview version of Windows 10 today called the "Fall Creators Update". We put it through its paces here. The operating system will be released to OEMs this summer, with Windows 10 being generally available this autumn. We're going to look in detail at the biggest improvements to the operating system. Windows 10 is designed around the idea of "universal apps" - you will be able to access the same productivity applications, regardless of the device you are using. Windows 10 will also be the operating system on PCs, tablets, smartphones, and the Xbox One. It seems as though Microsoft is taking significant steps to ensure the operating system works seamlessly across devices. The new Windows 10 update 6a5afdb4c
