This utility can browse the WhatsApp messages and attachments without having to access the archive file. Keywords: WhatsApp, iOS, WhatsApp, WhatsApp messages, WhatsApp logs, WhatsApp backup, WhatsApp databases, WhatsApp chat, WhatsApp transcripts, WhatsApp backup to external hard drive, WhatsApp backup to email, WhatsApp to Outlook, XOR, Elcomsoft eXplorer for WhatsApp Crack Mac, Elcomsoft eXplorer for WhatsApp Activation Code XOR, cXOR, Elcomsoft eXplorer XOR Requirements: Requires iOS 4.2 or later. Compatible with iOS 7 or later. It is the start of a new year and time to celebrate! This time, we present you a shareware cXOR (canceled XOR), made for extracting WhatsApp messages from iOS backups, as well as browsing the backup files from your computer and desktop. Having lived through several WhatsApp mass-messaging attacks, as well as users complaining about losing their data, we present to you the solution to those problems. cXOR allows you to easily browse and extract WhatsApp backup files as well as browsing the installed WhatsApp backup database. However, cXOR does not support the XOR-decryption, as this would result in decrypting the whole file. However, cXOR can extract WhatsApp messages stored within an iOS backup file. What cXOR does not support is the direct extraction of WhatsApp log files from the backup. Still, it allows to extract the backup logs with individual features such as date, messages, number, contacts, and email addresses. All cXOR functions work as follows: you first select the source where you want the backup logs from, then select the type of the login backup that you have on your system, and then choose between folders (e.g. "Files") and dates (e.g. "This week", "Last week", "This month", "Last month") to browse the backup logs. Once you find the files or folders you want, you can use the option "Extract". cXOR will then extract and open the desired files or folders and convert them to regular text files. To save on space, the utility renames these files and folders. For example, you have a backup log from WhatsApp which contains 2,200,000 separate text files that are not linked between each other, then cXOR will first extract all the 2,200,000 individual text files (e.g. "WhatsApp 6a5afdab4c
