KEYMACRO's main window contains a navigation panel which allows you to access all the other functions of the software, including the ability to add new macros, edit those you already have, remove macros and much more. Since there are two different type of keyboard shortcuts, you can either edit the hotkeys of the system keyboard, or define new ones in the third menu. To start using this program, you will have to install the main software, then copy the setup.exe file into the folder where you want to store all the macros you assign.
