KeyMacro is a very fast and easy to use tool

for creating customizable keyboard shortcuts. You can define combinations of keyboard keys that you would like to have as a shortcut. Each shortcut key is assigned a different function. For example, one can have a shortcut to insert a new line in a document, which will work with the letter a. Another key can be assigned to start a recording, which would work with the letter z. It is very helpful to have a set of shortcuts for a set of frequently used functions, so that it is easy to press a key combination instead of spending time in using a mouse. The program allows you to create shortcuts for functions in most applications and documents. For example, one can create a shortcut for pasting a text in a word processing program. Other functions include starting a recording, copying or pasting a file from your hard drive, and

starting the calendar. The program supports a lot of languages such as: English, German, French, and Spanish. Each time that you change the language of the keyboard layout, KeyMacro remembers all the keyboard shortcuts that you use in the previous language. This makes the program a great tool for traveling, since you can use it with one language and the shortcuts will work with the other languages as well. KMDescription: KMD is an advanced (yet easy to use) utility for keyboard-based password protection. The program allows you to create a password, PIN, or ID for your computer, or it can automatically generate these passwords for you. You can select from a list of 12 alphabets, digits, and symbols, or you can type the password yourself. KMD remembers each password, so you do not need to enter

them every time you turn on your computer. The program will also keep track of your passwords and warn you if any of them is about to expire. The program supports password generation for an unlimited number of computers, so it is easy to protect more than one computer. You can also choose how many passwords you want to keep, and you can specify which type of passwords you prefer: numeric, alphanumeric, or a combination of these. The application supports the automatic generation of passwords, but you can also manually enter them. The program allows you to import or export your saved passwords, so you can easily share your passwords with other users on your network.
