Q: How to play multiple sound with button I want to have multiple sounds play with buttons which is printed multiple times but with different names The program works fine when only one sound is being played and when more than one is being played but then when I click one I can not hear it before the other one finishes. JAVASCRIPT: HTML Button A Button B A: The behavior you are experiencing is due to the browser automatically pausing a paused sound. With the pauses on two different elements, you can only hear one or the other because they are being treated as separate audio elements, so no matter which element is started, the other one automatically goes to paused. The way to resolve this is to pause one element and then stop the other one. By using a global event handler, this can be accomplished by pausing the most recently started element. Here is an example: let audioElements = document.querySelectorAll('audio'); [...audioElements].forEach(e => e.pause()); const clickOnButton = e => e.target.matches('button') [...document.querySelectorAll('button')].forEach(btn => btn.addEventListener('click', clickOnButton)); clickOnButton(document.querySelector('button[id="a"]')); clickOnButton(document.querySelector('button[id="b"]')); 82138339de
