A telnet client written for Windows, Linux, Mac and Unix systems Waxcraft is a new media archiving product with a unique design that enables users to access and play their archives from their web browser. Waxcraft allows users to download free, high quality samples with no download limits and it also includes a free client for browsing your archive on your desktop. Beats is a free (as in beer) cross platform music player. It is my first "official" project. Beats is written entirely in C++, and is now using the Gtk+ libraries. However, this is just a port of my former project AlgolDW which was written in C++ for Borland Visual C++ 5.5, which is now Gtk+. Bix is a faster, easier to use chat room/mail reader that works under Windows as well as Linux/Unix. Bix is an open source program, and it is distributed under the GNU General Public License. I primarily designed and developed Bix myself, as a Windows application, and it became the first choice for mail client for my users in my own chat room service. While other chat and mail readers are available, Bix is definitely unique because of its speed. Humdinger is a free host-based mail redirector. Humdinger uses a server to store email messages. This enables the use of multiple clients, each accessing the message-server and send the message to a local client. Humdinger can also act as an IM server. FantasyWIP is a set of utilities to map Direct3D objects to the Ogre3D (OGRE) engine. The utility provides a simple scripting interface to quickly manipulate Ogre's model loader. It also makes it possible to build fully functioning in-game tools using OpenGL and Ogre. hulk is a cross platform console based programming toolset which allows you to build applications that run on platforms such as Windows, Linux, SunOS and Mac OS X (although at the time of writing its now only actively developed under Windows). For a long time I have been playing around with an idea of a text-based debugger for the Linux 2.2 kernel, with the idea that it might make development a bit easier, particularly for the kernel's block drivers. But first I needed some way

3D-MUD2 is a free, Open Source 3D, multiplayer text-based MMO game (MMORPG). It is currently freeware and requires the OpenGL library. It is a platform independent MUD (Multi-User Dungeon). Unlike most MUD clients, it doesn't require your own server. If you are running GNU/Linux, Windows, or Mac OS X, you should be able to download the source code from the (3D-MUD2 Web site. Read the provided text and documentation files carefully. Some of the main features of 3D-MUD2 include support for OGL, TCP and UDP connections. TCP means the game can be run over the Internet and UDP means it can be played from the same machine where it was compiled. This eliminates the need for a dedicated server. There are many areas to be explored in 3D-MUD2, and there are many things to do in the game. You may run one character in the game as a Admin, but there are many areas where players can explore. There is a sky, ocean, and land. There is more than one interior in the game. There are many options for weapons, armor, and items. And you will gain experience and items in every area. 3D-MUD2 features OGL support for artists and programmers, easy to program, simple to use. There are wizards that help you with the code, and many tutorials and examples are provided. 3D-MUD2 is very complete and is well documented. We know you will like 3D-MUD2, and we hope you'll join us in the game, "3D-MUD2".. PsyBBS was written to allow you to run PsyBBS, an electronic bulletin board. It was also written so that non-technical users could install and run a bulletin board without having to muddle through a ream of code. PsyBBS is probably best known for running the PsyBBS mailing list, and as of this writing you may still read the daily post, but you will no longer be able to reply to new posts. This package contains the binaries for users running Windows, Linux, or DOS systems. Lua::Gtk::Center is a Perl module that allows Perl scripts to deal with GTK+ widgets. It consists of the Perl module, Gtk::Center, and a Perl API,
