SwiftCraft Crack + Keygen For (LifeTime) Free

... SwiftCraft is a boat design tool that allows you to predict the speed, power and drag values for a certain motor boat. All the

calculations are performed by taking into consideration the parameters used by you to describe the boat. The program's interface guides you through all the steps and allows you to fully describe the project before starting the calculation. You can view the results is a graphical representation and select the parameters that are important to you in order to generate a report. Note: The registered users can update

the application to a newer
version. SwiftCraft

Sizeslider_N1 N1 is the fore and aft width of the floor in the cockpit, as measured in inches. You can use this slider to enter or modify the N1 size. Sizeslider_W1 W1 is the width of the gunwale of the cockpit. You can use this slider to enter or modify the W1 size. Sizeslider_H1 H1 is the height of the gunwale of the cockpit. You can use this slider to enter or modify the H1 size.

Sizeslider_W2 W2 is the width of the gunwale of the cockpit as it exits the boat and enters the water. You can use this slider to enter or modify the W2 size.

Sizeslider_H2 H2 is the height of the gunwale of the cockpit as it exits the boat and enters the water. You can use this slider to enter or modify the H2 size.

Sizeslider_Plate Y is the depth of the plate. You can use this slider to enter or

modify the Y size.

Sizeslider_Plate X is the depth of the plate as it exits the boat and enters the water.

You can use this slider to enter or modify the X size.

Sizeslider_Plate Z is the depth of the plate as it exits the boat and enters the water.

You can use this slider to enter or modify the Z size.

Sizeslider_Planation_1 X1 is the planation value of the first X-ray plane as it exits the boat and enters the water.

You can use this slider to enter or modify the X1 size. Sizeslider_Planation_2 X2 is the planation value of the second X-ray plane as it exits the boat and enters the water.

You can use this slider to enter or modify the X2 size. Sizeslider_Planation_3 X3 is the planation value of the third X-ray plane as it exits the boat and enters the water.

You can use this slider to enter or modify the X3 size. Sizeslider_Planation_4 X4 is

the planation value of the fourth X-ray plane as it exits the boat and enters the water.

You can use this slider to enter or modify the X4 size.

Sizeslider_Planation_5 X5
77a5ca646e

- Drag the points in order to define the boat shape. -
Select the hull shape. - Select the motor and propeller -
Select the water and wind resistances - Select the engine type. - Choose the number of cylinders. - Select the engine rpm and torque -
Select the propeller pitch -
Select the sailing direction (North=N, East=E, South=S, West=W) - Select the

sideslip - Scroll through the sail performance - Save the application settings - Run the calculation - View the performance parameters such as: - Speed - Power - Maximum speed - Max torque - Max rpm - Water resistance - Air resistance - Fuel consumption - Fuel cost - Carbon emissions - Transmissions - Drag - Sideslip - Sail direction - Maximum sideslip - Surface area of the boat - Thrust -

Center of gravity - Weight -
Sails - Length - Beam - Draft
- Displacement - To get the
best performance you can try
to keep the following values:
- Length - Beam -
Displacement - Hull shape -
Pitch - Shape of the
propeller - Number of
cylinders - Engine type -
Engine rpm - Sail area -
Sailing direction - Sail type -
Number of sails - Number of
spinnaker - Number of
headsail - Length of all the

sails - Weight of the boat -
Number of ballast - Ballast
capacity - Center of gravity -
Drag - Minimum sideslip -
Maximum sideslip - Total
length - Width - Hull shape -
Length - Beam - Draft -
Displacement - Weight -
Hull type - Number of main
sails - Number of headsail -
Hull weight - Hull shape -
Sail area - Sailing direction -
Sails - Length of all the sails
- Number of spinnaker -
Number of headsail - Length

of the spinnaker - Length of
the headsail - Weight of the
spinnaker - Weight of the
headsail - Weight of

What's New In SwiftCraft?

The program allows to
calculate speed, power and

drag of motor boats with one or more engines. The new version supports: 1) boats with different lengths and widths 2) floating and hard boats 3) boats with different hulls and layouts (e.g. top or bottom) 4) boats with different ballast and weights 5) boats with different lengths and load 6) boats with different engine sizes and horsepower 7) boats with different lengths and other hull parameters 8) boats with

multiple engines 9) boats with different ballast and weights 10) boats with multiple engines 11) boats with multiple engines, one-touch weight control and hydrodynamics 12) boats with different water and oil temperatures 13) boats with different lengths and lengths of propeller shafts 14) boats with multiple speeds 15) boats with multiple engines, one-touch weight control and hydrodynamics 16) boats

with different lengths and
lengths of propeller shafts
17) boats with different
water and oil temperatures
18) boats with multiple
speeds 19) boats with one
propeller shaft and multiple
engines 20) boats with
multiple lengths and
different ballast and weights
21) boats with different
lengths and lengths of
propeller shafts 22) boats
with different water and oil
temperatures 23) boats with

multiple speeds 24) boats
with multiple engines 25)
boats with one propeller
shaft and multiple engines
26) boats with different
lengths and lengths of
propeller shafts 27) boats
with different water and oil
temperatures 28) boats with
multiple speeds 29) boats
with different lengths and
lengths of propeller shafts
30) boats with different
lengths and lengths of
propeller shafts and different

ballast and weights The product can be used as an independent tool for motor boats and for motor boats only. The program is designed for both Windows and Linux OS. Windows and Linux versions are provided. The program is designed for a wide range of users and it is not very difficult to use. The program provides a user-friendly interface with all the elements presented in a logical order. The program

includes many tutorial videos, articles and a user's manual with a complete guide to all the features of the program. The program is available for immediate download after registration. The time for registration is not long and is less than 10 minutes. The program is free. Features: * Calculate speed, power and drag of

System Requirements For SwiftCraft:
