Like all CAD programs, AutoCAD was created for architectural and engineering users. AutoCAD has also been used for mechanical engineering, civil engineering, architectural, landscape architecture, transportation, and infrastructure design. AutoCAD has numerous capabilities including creating and editing 2D, 3D and 4D models. The 2D version is included as part of the Autodesk AutoCAD Architecture and Engineering Suite. All versions can be accessed through a single user interface, the AutoCAD environment. Design by Hand Invented by a team of university students in the late 1970s, the first version of AutoCAD, also called Design by Hand, allowed users to draw freehand on a set of orthogonal guidelines. Rather than use raster technology, which would require creation of graphics files, such as DWG files, it displayed the 3D model on a 2D screen, without creating a file. The 1990s saw the introduction of many improvements in the DWG file format. In the late 1990s the introduction of feature-based modeling enabled users to construct parts and assemblies in the drawing area. The original AutoCAD program was used by the United States Navy to design the Nautilus. It was the first product of the new Autodesk. A student working on the final design of a rocket. Photo: Autodesk The 2003 release of AutoCAD 2003 opened the door to cloud computing, extending the same software to smaller devices and mobile phones. A Java version was also available, allowing users to access the full application even if they had not previously installed AutoCAD. This free version also enabled access to the repository of sample drawings called the Library. AutoCAD Architecture & Engineering AutoCAD Architecture & Engineering was released in 1999. It is designed for professional architects and engineers. It is not available as a free product. One of the major new features in AutoCAD Architecture & Engineering is the ability to import drawings created in FreeHand, Adobe Illustrator and Adobe Photoshop. AutoCAD Architecture & Engineering was also the first AutoCAD to support multitouch on Windows operating systems. Users were able to zoom in and out using two fingers. Another major new feature was the introduction of the concept of parts and assemblies. This feature enabled 3D objects to be combined, edited and exported as a single drawing. This is known as feature-based modeling. One of the

North Korea's Defence Ministry has said it would hold an emergency meeting of the ruling Workers' Party to discuss and manage the coronavirus outbreak that has swept through the country. Kim Jong-un, the country's leader, announced the move on Wednesday at the 7th Congress of the Workers' Party, which is usually held once every five years. On Thursday morning, the ministry said in a statement on state-run television that the conference, which would be held on April 3, would discuss measures to "overcome the current situation and protect and save the lives of the party members and people". On April 10, the vice-minister of the party's Central Committee, Pak Pong-ju, would make a report to the meeting on what actions the party had taken to tackle the outbreak and what measures it had put in place. A separate statement on the party's website said on Thursday morning that "party, state and military organisations" were working together to "fight" against the coronavirus. On Wednesday, Mr Kim had warned that the outbreak could spread in the country and suggested that the party should draw up a detailed plan to prevent "acute and chronic cases" of the virus. On Tuesday, he said the country's leadership was considering whether to issue an order to people to be prepared to go into quarantine when they return from abroad. The outbreak has not yet reached North Korea's largest city, Pyongyang, or any of the other three metropolises – Wonsan, Sariwon and Haeju – which are home to more than 20 million people. However, the ministry said in a statement on Thursday morning that 14 people were currently being quarantined in Wonsan, while 14 other people were being put under "hygienic observation".Our fleet of coaches is great, we will tell you which one is best for you.
