Keyboard Shortcuts - AutoCAD Torrent Download shortcuts Jump to: Table of Contents AutoCAD Fundamentals It is possible to use the keyboard to navigate through the menus and work spaces of AutoCAD. If you are used to working with other programs like Microsoft Word or CorelDraw, then the basic keyboard shortcuts may be easy to remember. Note that the keyboard shortcuts listed in this article only apply to the primary functions of the application. For example, to draw a line on the current layer, you must first select a line style. In the Drawing Area, you can draw a line from point A to point B by typing the command C, then point C; and if you typed the command M, a menu would open to choose various line types. These are the keyboard shortcuts in AutoCAD, grouped into a menu of categories, with descriptions of the actions. You can turn on AutoCAD's keyboard shortcut to show these shortcuts on the ribbon bar. General Shift+PgUp - Move up one level Shift+PgDown - Move down one level Home Ctrl+ Move to first screen level Ctrl+ Move to last screen level End Ctrl+ Move to last screen level Ctrl+ Move to first screen level Delete Del Delete an object Backspace Backspace Backspace (keyboard) Clear X Clear object on current screen AutoCAD does not automatically clear objects on the screen, but you can clear the object, the active layer, the current view, or the entire drawing by hitting the "Clear" key on the keyboard. UXD UXD is a format that allows storage of Cracked AutoCAD With Keygen objects in the XML file format. The format is a binary format with a layered file structure. The official term is Autodesk XML Digital Drawing, but the term UXD is also in use. Technical characteristics Encoding AutoCAD creates new documents in the binary DXF standard format. The bit stream is split into horizontal and vertical components, with the horizontal component stored as a 16-bit word, the vertical as a 16-bit word and the colour components as a 16-bit word. The colour components are sent as a tripple of 8-bit values, each component is one bit of the colour bit word. The last bit of the triplet is the alpha channel. The colour components are: 16-bit word Red Green Blue Alpha The bitstream is constructed by the AutoCAD program or by third party applications. In AutoCAD 2007, the DXF format was improved to support DWG files as well. The file is still encoded in the binary DXF format, but the bitstream now consists of a series of 32-bit words representing elements in the drawing.
