AutoCAD is not a product of the U.S. government, although Autodesk is headquartered in San Rafael, California. However, the application was conceived by United States Navy Commander Scott A. Johnson while working in the U.S. Navy's Materials Technology Lab. In 1982, Johnson, along with two of his colleagues, worked on a computer program designed to aid in the creation of ship hulls. Johnson became interested in CAD and founded Autodesk in 1987. The original releases of AutoCAD used a proprietary database, the "ACE format". The first version, released in December 1982, was known as the "AutoCAD Basic System" and featured only line and polyline drawing capabilities. To meet the demands of international trade, Autodesk, in 1986, released a more elaborate version of AutoCAD. This version featured three-dimensional (3-D) geometry and was also available in French and Spanish, among other languages. Complex 3-D geometry. 3-D features require complex drawing methods, and in order to create complex 3-D drawings, it was necessary to use detailed guidelines and templates to aid in their creation. 3-D drawing templates, when they were first introduced, were considered to be a nuisance by some users. To combat this problem, Autodesk allowed a user to opt out of using templates for simple 3-D drawings. In addition, at this time, to be able to share or exchange CAD files with other users, AutoCAD could only export to RLE (Run Length Encoding) format. This export format is supported by most software applications available on today's operating systems, but it was not supported by other major CAD products at the time. Another major improvement in Autodesk's CAD system occurred in 1989, with the release of AutoCAD for Windows, which featured a completely redesigned user interface. The interface was optimized to run in a window environment and included a new symbol manager. Other major improvements included a new line quality engine, text editing features, and the ability to combine AutoCAD drawings in a specific order. In addition, by 1993, the AutoCAD application gained the ability to import and export DWG files as well as Windows vector format (WVX) files. Furthermore, several major features were added, including the ability to import and export DWF files, color indices, and line styles.

Over the years, there have been a number of competing drawing interchange formats. The two most widely used drawing formats are the widely used and older native format (AutoCAD and related formats), and the newer and more complex and extensible XML based drawing format. AutoCAD has historically supported both formats and has often maintained a set of formats so that users can import to whichever format they choose. History AutoCAD was originally a self-developed product created by David O. Wherley and named Dynamic-CAD (not to be confused with third-party CAD software Dynamic-CAD developed by Zenit Software). This was a pioneering product for creating parametric designs and was the first application in the AutoCAD product line. It was originally released in 1987. In the 1990s, Autodesk acquired Dynamic-CAD and renamed it AutoCAD, much like Autodesk did with ParaCAD in 1992. Other products added onto AutoCAD in the late 1990s and early 2000s were the architectural suite: Architecture, Civil 3D, Electrical 3D and Engineering 3D. AutoCAD has evolved from the original Dynamic-CAD, as well as from the Architecture, Civil 3D, Electrical 3D and Engineering 3D suites. Since the late 1990s, much of the underlying engine code has been rewritten. As with the rest of the products, AutoCAD 2016 is more than a decade old and is nearing its end of life. Since it was originally created by Autodesk, AutoCAD has been designed primarily to work on Microsoft Windows. Starting with AutoCAD 2015, developers can create applications that work on Mac and Linux as well. Early history AutoCAD was originally developed to help the industrial design and construction (IDC) software company David O. Wherley. Wherley was working as an engineer at General Electric in the 1960s and wanted a CAD system that could be used for both mechanical design and electrical design. Wherley created an architecture program for IBM and a construction program for GE. The construction program, while widely used, did not work well on a GE computer, so in 1970, Wherley's group hired an engineer named David O. Wherley to develop a new CAD program. By 1974, this new program had been released under the name Dynamic-CAD. Before release, Dynamic-CAD was a limited product designed for 2D drafting and only 5b5f913d15

Wyse Technology, Inc. Netgear, Inc. v. Wyse Technology, Inc., 722 F.3d 215 (4th Cir. 2013), is a trademark infringement case filed by Netgear, Inc. in the United States District Court for the Eastern District of Virginia against Wyse Technology, Inc. on March 6, 2010. The court entered a permanent injunction against Wyse Technology, Inc. on July 30, 2010. Background Wyse Technology, Inc. is a Canadian company that creates industrial products using radio technology, and had intended to market a wireless access point product similar to Netgear's N600. In February 2010, Wyse received a cease and desist letter from Netgear regarding Wyse's plans to produce a wireless access point. In April, Netgear filed an action against Wyse in the United States District Court for the Eastern District of Virginia and sought to obtain a permanent injunction against Wyse. District court ruling The district court ruled in Netgear's favor on June 30, 2010. The court's decision stated that Wyse "engaged in willful and blatant trademark infringement, employing a confusingly similar name, logo, packaging, advertising, and website" and that "Wyse likely will be continuing to sell its products, in violation of Netgear's rights, unless enjoined." In an earlier case, the court had ruled against Netgear, stating that "Wyse's use of its mark was not likely to confuse consumers." Wyse appealed the case to the United States Court of Appeals for the Fourth Circuit. Fourth Circuit ruling The Fourth Circuit ruled on August 14, 2013, that Netgear did not violate the Lanham Act or any other law and Wyse must stop using the trademark. The decision is significant
