Word VBA Rebuilder 3.0.3 - A program that automatically rebuilds VBAs in the Microsoft Word (.doc) format. All the macros of a macro-enabled document are stored in a "VBA project". This project can be saved and opened as a

new document. After opening, all the macros can be recreated. This version includes a great new feature: when the original source document is damaged or the copy-protection changed, you can open the VBA project. The VBA project is automatically rebuilt with the correct references and all the macros can be opened in the correct order. With Word VBA Rebuilder you can: - Rebuild macros. - Rebuild form or UI dialogs. - Repair damaged macros. -

Repair bad references. - Replace all existing references in macros to the right version. - Use reference sets to speed-up the project rebuilding. - Export as CSV file. - Continue working in the macro editing mode. What's New in Word VBA Rebuilder 3.0.3: * An improved error handling. * Improved repair of references. * Improved speed of the project rebuilding. *

If a document does not contain a Macro, or the document that contains the Macros is damaged, you cannot recover it.Q: How to handle the information that a user has voted many times in the comments? The user posted a comment

and then the user left a comment and voted his comment. The original user's comment was deleted because the user left too many comments. The user's vote was also deleted because he left too many comments. Question: What is a good way to handle this situation? A: Simply and in line with the guidelines, link to the user's profile and flag the comment. Vote counts are not public and will not be affected by any of this. A: It should be handled as it is stated on

the faq: If a comment you've made is deleted, you'll no longer be able to see the comments you've posted. If you were last to post a comment, we won't be able to delete your comment or vote on it. If your comment is deleted, there's a chance that other people's votes will be deleted too, so if you'd like to make sure your comment remains visible, be last to post it. Q: set application-wide standard directory via Qt I would like to set the standard

directory for my application via Qt, in order to prevent my users from having to specify the full path to a file for example. I could simply add a couple of lines in the main function, but I don't want to do this. Is there any way to define the application-wide default directory for files using Qt? A: There's no Qt way of doing that. You have a couple of options. The most basic is to simply use the absolute paths: QDir directory("absolute-path"); QFile

file("file.ext", "r"); There's not a lot of benefit to using paths like this though, as it won't work if you install the app in different places, and it's a pain to deal with. Use the QSettings class to save the values of some of the key directories in a file and read them back in. You could create the file yourself or you could just 1d6a3396d6
