What's New In JGloss?

JGloss is an intuitive Java application that enables you to annotate Japanese text, in order to help you learn this language much easier. JGloss is very easy to use, but for those who still need assistance, a welcoming wizard is available, guiding you through all the necessary steps for annotating Japanese text. The application provides support for EDICT and Wadoku Jiten dictionaries and enables you to export the annotated document and the vocabulary list. **Release Notes:** This is a major release. The major changes are: * The annotation GUI is now integrated into the Swing * The annotation functionality now supports annotating Japanese text * The annotation GUI now supports auto-reverting (undo) of annotations * Annotation export to HTML (non-text) is supported. You can save the annotation to a specified file or to a the clipboard. * The annotation export to HTML now supports saving the annotation as images.

These images can be saved as either .jpg or .png files. * The export to HTML now supports a different HTML file for each type of annotation. Significant changes in this release: * JGloss now also allows you to annotate a document in the above-mentioned .jgloss format. * The new annotation functionality now supports writing the annotation in a specified font. * The new annotation functionality now supports automatic redrawing of the annotated document. * You can now select multiple (annotated) documents when opening them, and highlight the selected items automatically. If you like JGloss, you might also want to consider downloading Kodachi to annotate PDFs.
