- KMAA writes a macro directly to the registry, so you can delete it without the need of execution! This application is designed to make life easier. KeyMACRO is a easy-to-use utility that will help you to create keyboard macros in just a few steps. KeyMACRO is based on the TinyMw2 project. This project was designed to create keyboard macros, which were simple and easy to use. KeyMACRO allows you to create shortcuts for different types of keyboard commands. For example, you could use it to create a shortcut for typing a search query in your favourite search engine, or to automatically sign in to your favourite web page. KeyMACRO can also be used to create keyboard macros, which are slightly more complex. In this scenario, KeyMACRO is used to execute a different command for each key pressed, instead of just typing a short text.
