Mojolicious implementation that doesn't use macros.

Mojolicious::Lite is a pure Perl implementation of Mojolicious. It takes a block of code and turns it into a method call.

Mojolicious::Lite is a class written in Perl and tested using MojoTest, with a full test suite, and no VM or bytecode overhead. All tests pass and this gives a confidence in the design of the class. Q: Use of @nested

---

and @ifields metadata in version 1.0 of C# 6.0 I'm studying the new features of C# 6.0 and reading about meta-data in NodaTime (release notes). It seem that the use of the new annotations, like @nested, was there to solve a problem. Since there are no any automatic conversions between datetime and string, then the developers added annotations to solve that particular problem. So my

---

question is, what problem does the developers had that @nested is here to solve? So I'm asking that instead of writing @nested all the time I can write @string instead of @nested. The same goes for @ifields or @string. Would it be that way? A: It's for maintaining backwards compatibility, without any problems. Nested metadata means it's possible to use
