" Paragon Hard Disk Manager 16 Pro v16.14.3 Bootable ISO - [SH] Serial .The present disclosure. relates to an image forming apparatus, such as a printer or a copying machine, which forms an image on a recording medium and particularly, relates to an image forming apparatus in which a power unit and a control unit can be disconnected from each other, and an image forming unit can be detachably attached to the power unit. Image forming apparatuses are widely known which are configured as a combination of a carriage with an image forming unit which forms an image on a recording medium, and a drive power unit configured as a motor and so on which drives the carriage. In an image forming apparatus disclosed in Japanese Patent Application Laid-Open No. 2003-279357, for example, a power unit and a control unit are connected to each other by a connector. In this apparatus, the power unit can be separated from the control unit by being disconnected from the connector. Such a connector is formed with a large number of through holes for inserting the connector and is provided in a connector-side housing constituting the power unit. Also, the connector-side housing is configured so as to be inserted into a housing-side housing constituting the control unit. In the housing-side housing, a plurality of terminals are arranged. When an image forming unit is inserted into the connector-side housing, the terminals are in contact with the corresponding contacts formed on the image forming unit, thereby electrically connecting the image forming unit to the drive power unit. In the image forming apparatus, however, the positioning of the image forming unit between the power unit and the control unit is not stable. In other words, positioning between the image forming unit and the power unit or between the image forming unit and the control unit is not normally carried out in the insertion of the image forming unit. In addition, after the insertion, the housing-side housing is subjected to a large load.
