

Divinity2dragonknightsaga14970patch30 ~REPACK~

[Download](#)

This is similar to how Gertrude Stein's famous quote should be interpreted: there is no there there. A: When we look closely, the cleverness of the title becomes obvious: We start with a list of dictionaries and tell it to return the first entry when no key matches. Please note that this is the dictionaries' first element not the last. >>> l = [{"key": 'a', 'key2': 'value1'}, {'key': 'b'}, {'key3': 'value2'}] >>> d = {1: d} >>> [d[k] for k in ('key', 'key2', 'key3')][a, 'b', 'value2'] So, we can encode the first dictionary with every key into the list with encoding and decoding function: >>> from random import choice >>> encoded = [choice(l) for _ in range(10)] >>> encoded [{"key": 'a', 'key2': 'value1'}, {'key': 'b'}, {'key3': 'value2'}] >>> _decode('key') 'a' >>> _decode('key3') 'value2' Then, we extend the dictionary, overwrite the keys in the list, and encode it back to the list: >>> n = 10 >>> d = {1: {2: 'key'}} >>> for i in xrange(n): ... l.append(choice(encoded)) ... [{"key": 'a', 'key2': 'value1'}, {'key': 'b'}, {'key3': 'value2'}] >>> encoded [{"key": 'a', 'key2': 'value1'}, {'key': 'b'}, {'key3': 'value2'}, {'key2': 'key2'}, {'key': 'a', 'key2': 'value1'}] Now, we can see how a,b,value2 is encoded: >>> encoded.__next__()['key'].decode('key') 'a'
