\* \*\*Adobe Photoshop Elements:\*\* Photoshop's basic editing tools are available in a more-affordable version of Photoshop, called Photoshop Elements. If you're new to image editing, Photoshop Elements is the way to go. The learning curve is steeper and the software is more difficult to master than Photoshop, but the price is right. Figure 14-2 shows an image-editing tutorial in Photoshop Elements, which I discuss in the next section. \* \*\*Adobe Photoshop:\*\* This version of Photoshop is the most powerful and capable of the three Adobe programs. If you have used Photoshop in the past, this is the version for you. This version of Photoshop has a steep learning curve because it has a lot of advanced features and many options for adjustment. If you want to create beautiful images, this is the program for you. Photoshop has five main tools for editing. Figure 14-3 provides an overview of each tool. Don't fret if you are new to image editing; I explain all the tools in detail later in the chapter. FIGURE 14-2: Photoshop Elements is a good way to start your image-editing journey. FIGURE 14-3: Photoshop has five tools for image-editing tasks.

Q: Black Screen with cross-thread exception only when module is activated I have been making a simple 2D platformer where the background music is played, and when a key is pressed the sound gets louder. I originally had this section in a separate project, and it worked, however, now that I have tried to move it to the class where the game is, I am getting an "Exception was unhandled by user code" exception at the line "SoundSoundInstance[] sounds;". I am doing this in a WindowsForms Application in VisualStudio. This is the part of code that is supposed to increase the volume of the sound. I have tried to modify the part of the code but nothing has worked. I have put comments where I modify it and where it is supposed to be taken care of.

```
SoundsSoundInstance[] sounds = new SoundsSoundInstance[1]; //Point S is a location on the grid Point S = new Point(1, 1);
sounds[0] = new SoundsSoundInstance(0, Point.Round(S.X, 15), Point.Round(S.Y, 15)); SoundSoundInstance[] sounds = new
SoundsSoundInstance[1]; //Point S is a location on the grid Point S = new Point(1, 1); sounds[0] = new SoundsSoundInstance(0,
Point.Round(S.X, 15), Point.Round(S.Y, 15)); Point S = new Point(1, 1); //Point S is a location on the grid sounds[0] = new
SoundsSoundInstance(0, Point.Round(S.X, 15), Point.Round(S.Y, 15)); It seems to me like it has something to do with threads,
but I am really not sure and have no idea of how to solve this. The exception is with the module "Play Sound System". It is the
main module of the game. This is the code inside it: SoundSoundInstance[] sounds; // Point S is a location on the grid Point S =
new Point(1, 1); // Point S is a location on the grid SoundsSoundInstance[] sounds = new SoundsSoundInstance[1]; //Point S is a
location on the grid sounds[0] = new SoundsSoundInstance(0, Point.Round(S.X
```

Q: Trying to figure out how to do basic addition and subtraction in C# So this is an easy question but I can't wrap my head around it so I'm stuck. Here is an example to demonstrate what I'm trying to achieve. const double x = 3.1415926535; const double y = 6.625; var first = x + y; //5.0 var second = x - y; //4.8282334673 The question is how do I get first and second to be the same? I am trying to do the following for a homework assignment double first, second; first = Convert.ToDouble(input1) + Convert.ToDouble(input2); second = Convert.ToDouble(first) - Convert.ToDouble(input2); return second; And both input1 and input2 will always be double. A: Convert the input1 and input2 to string, then use string.Split to get an array of strings. Loop through each string in the array, convert the string to double and add them together. Q: sqlite query when order by not given I have a table of list of city names and i have a table of districts populated by the city names in the list. I want to select all the district which are not in the list but the order in which they will be returned should be the same as the one in the list. For example, I have CREATE TABLE districts ( cityid INTEGER, name TEXT ); INSERT INTO districts (cityid, name) VALUES (1, 'Bangalore'); INSERT INTO districts (cityid, name) VALUES (2, 'Pune'); INSERT INTO districts (cityid, name) VALUES (3, 'Mumbai'); INSERT INTO districts (cityid, name) VALUES (4, 'Hyderabad'); CREATE TABLE cities ( id INTEGER, name TEXT ); INSERT INTO cities (id, name) VALUES (1, 'Bangalore'); INSERT INTO cities (id, name) VALUES (2,
