AutoCAD is fully available in several languages such as the German localization, Romanian and Polish translations. The German version of AutoCAD is officially named "AutoCAD LT" instead of "AutoCAD LT (german)" and it is distributed by Autodesk Inc. A similar thing happens with AutoCAD Architecture, AutoCAD Electrical and AutoCAD Civil 3D, which are officially called "AutoCAD LT Architecture" (instead of "AutoCAD LT Architecture (german)"), "AutoCAD LT Electrical" (instead of "AutoCAD LT Electrical (german)") and "AutoCAD LT Civil 3D" (instead of "AutoCAD LT Civil 3D (german)"). WRITE! Today I am sitting on the porch of a Bed & Breakfast in the mountains of
Tennessee (my favorite place to sit outside and write!). I have a bed in a little room
(and there are few things more fun than waking up to the pitter patter of little feet and
then watching them explore the whole place) but since the little one is still napping in
her room (it is a little room with a crib, mini-van, full kitchen, laundry, and a deck in the
back where the chickens and bunnies live) I spend the majority of my day outside, my
favorite place to sit outside and write! I keep a little notebook next to me and every
now and then I will write down a picture or something to remind me of a scene I have
written (its much easier to tell that story by writing it down than trying to tell it to
someone who is not there). Today I was sitting out there and I thought ca3bfb1094

I have a class that looks like: public class XXX { public void someMethod(Object A) { //do something } } I am transforming it with advice: public aspect Transformer { @Around("someMethod()") public Object doAround(ProceedingJoinPoint pjp) throws Throwable { Object result = pjp.proceed(); return result; } } Now my problem is when I compile my code with JDK 6 and turn on -source 6, the transformer is invoked while compiling. When I try with JDK7, aspectj version = 1.6.13, I turn on -source 7, the transformer is not invoked until runtime. Note: The transformer should be invoked only for someMethod() and not for all methods. The aspectj version 1.6.13 has introduced changes to new ThreadGroup("myThreadGroup"), Thread is now cached internally. In other words, the new Transformer is not not invoked for the new thread that is created. Is there any way to make it work in JDK7? A: You should make sure your aspect is runtime weaving enabled, if so then it would be invoked for the same thread. As a matter of fact the whole Spring AOP model is built around the same principle. 1. Field of the Invention The present invention relates to a tape cassette that has a two-reel tape cassette,
