AutoCAD (© Autodesk, Inc.) Today, most major CAD software programs operate on personal computers, using a client-server architecture. Each AutoCAD workstation, or client. On the other end of the connection, a server computer handles all requests from multiple workstations and routes work instructions to a workstation at the correct time. History of AutoCAD originally named MicroCAD, AutoCAD was created in 1980 as a DOS-based microcomputer CAD program. Steve Ouimet was the first programmer to work on AutoCAD, which was created in-house at AutoDesk, where he was the technical director of software development. The first version was limited to drafting a single project. A year later, the program was released to the public and renamed AutoCAD. The program was marketed as a smaller, easier version of the industry-standard CAD programs, such as AutoCAD LT, which was released in 1986. In November 1985, AutoCAD was introduced at the National American Association of Homebuilders (NAHB) Convention in Dallas, Texas. The exhibit included a computer-aided design and drafting table for home builders. In addition, AutoCAD was also available to be licensed for commercial use at a cost of \$7,995. In 1987, the program was expanded to include a variety of professional drafting tools. Version 1.0 was released in November 1988. In March 1989, Version 2.0 was released, and section views. A much-requested feature was the ability to annotate drawings with text and graphics, which was introduced in Version 4.0 in September 1994. AutoCAD 2.5 was released in December 1995, along with the first release of AutoCAD LT. The new version contained tools for laying out architectural and mechanical CAD, parametric modeling, and templates. In addition, it introduced AutoCAD Civil, which was a replacement for the earlier Xplorer Xref program. AutoCAD for Windows was released in March 1997. In May of that year, AutoCAD LT was released, which

Deadly suicide bomb hits Sydney police station By Nick Beams 12 September 2014 As the full horror of the horrific bombing was unfolded on Monday, the media, politicians and pundits drew comparisons between the attack and the atrocities of the Islamic State (IS) in Iraq and Syria. Yet the stark truth is that this bombing could not have taken place in either of those conflicts. It took place in the Australian city of Sydney. What is remarkable is not that there are those in the corporate and political elite who have opened up a Pandora's box of support for escalating foreign wars to protect "democratic", "stable" or "prosperous" societies. What is remarkable is that the resources and determination of those who carried out the attack have been relatively modest. They were able to lay their own charges, assemble their own components, stage their own operations and yet cause such widespread and devastating injuries. There are two key aspects to the attack. First, the highly trained militants murdered and maimed in the bombing of the police commissioner's office were members of the Islamic State of Iraq and the Levant (ISIL). The official line being followed by the media and the political establishment is that the plot was hatched in Syria and was orchestrated by the Islamic State in Iraq and Syria (ISIS). Only this week, a report published in the political establishment is that the plot was hatched in Syria and was orchestrated by the Islamic State in Iraq and Syria (ISIS). Only this week, a report published in the plot science are governed to such the second science are governed to such the second, there is no doubt that the unfolding disaster is the result of a two-stage operation. In the first stage, international and Middle Eastern intelligence services, working in close coordination with the US and Australian governments, were forced to suspend any investigation into the network of cells that had supposedly penetrated the inner circle of the Islamic State and were preparing for large-scale attacks. In the secon
