Hum Dono (1985) - Hindi comedy starring Rajesh Khanna, Hema Malini, Reena Roy, Johnny Walker and Jagdeep, directed by B. S. Glad. One day, a tragedy strikes a young couple when their beloved father commits suicide, and the heavy burden of raising two young children falls on their shoulders. But even in such a difficult situation, they will find the strength not only to fight for their children, but also to continue to live on, with dignity, taking the blows of fate for

granted.

Edit: (reupload of answer) The error that you get means

that you're trying to put the file in a directory that does not exist on the disk. In the root of the disk, this would be the top of the directory tree. Then, if you cd to a different directory, that directory's top of the directory tree will be what gets used to store the file. So, when you reach the top of the directory tree in your attempt to write to a file, cd'd to the directory where that file will be stored, you're not actually writing to a file anywhere. You're writing to the top of the directory tree. That's because you've written to the root directory! The error is because you need to write to the file in a place that exists. For more information, see: [Why can't I write to a directory that does not exist on disk?](#) [Can't append to a file that doesn't exist?](#) Addendum: (reupload of answer) Take a look at the myFile.txt file. It's on the disk. It's just not in the directory where you're writing. If you change directories to the directory where the file is on the disk, you

should then be able to write to that file. Q:
unable to get the key and value from
jQuery object I am trying to use a variable
var opdata= jQuery('.op-data').attr('id
