Mastered for. L. m4a 06 Dont Forget
Where You Belong. Cyclosporin A inhibits
replication of seasonal H1N1 and
pandemic 2009 H1N1 influenza virus in
human alveolar epithelial cells. Human
infections with 2009 pandemic H1N1
(pH1N1) virus resulted in a heavy toll on
the population worldwide. Although the
efficacy of the standard antiviral therapy
with oseltamivir has been reported to be
very good, the efficacy of
immunosuppressive therapy with
cyclosporin A (CyA) for the treatment of
viral pneumonia remains poorly
understood. We investigated the effect of
CyA on pH1N1 replication in cultured
human alveolar epithelial A549 cells. In
vitro cell culture experiments were
performed to study the effect of CyA on
replication of seasonal H1N1 and pH1N1
influenza virus strains in A549 cells. The
in vitro cell culture experiments revealed

that CyA effectively inhibited the replication of both strains of influenza viruses in a dose-dependent manner. These findings indicate that CyA could be a potential therapeutic option for the treatment of human H1N1 infection as well as human H5N1 infection that may lead to fatal encephalopathy.
